

IN THE ABSTRACT

Please amend the abstract as follows:

a17  
An assembly including a door panel, a window regulator housing component, and  
a window regulator drive system component. The door panel is first, second, and third-  
component, the first component being secured to the second window regulator housing  
component by a deformed portion to provide a subassembly. The, in which the deformed  
portion is utilized to releaseably secure the third window regulator drive system  
component to the sub-assemblysubassembly via a fourth component.
